MISSION CRITICAL AT GLUMAC

WE SPECIALIZE IN COST-EFFECTIVE, SUSTAINABLE MEP DESIGN OF MISSION CRITICAL FACILITIES WORLDWIDE.

Our mission is to create green buildings that work. Our services include mechanical, electrical and plumbing (MEP) consulting engineering, commissioning, CFD modeling, energy modeling services, laser scanning and 3D BIM and REVIT modeling. What makes Glumac different is our innovative approach to designing data centers that fully optimize the resources locally available. Our solutions lead the industry by aggressively optimizing data center PUE and WUE. Working for with clients to bring energy cost down and cost and improve efficiency is a core driver for our talented team of mission critical thought leaders, project managers, and engineers. We have deep experience in enterprise, colocation, and internet data center markets.

OUR SERVICES

CONSULTING

- Site Selection Services
- Master Planning
- Energy Efficiency Assessments
- Laser Scanning/Modeling
- Tier/Reliability Assessments
- Pre-Lease Review
- Feasibility Studies
- Total Cost of Ownership Analysis
- PUE/WUE Optimization

ENGINEERING

- Mechanical
- Electrical
- Plumbing
- Fire Protection and Life Safety
- RCDD
- Lighting
- Building Automation Design

COMMISSIONING

- QA/QC
- Schedule Coordination
- Start Up Acceptance Testing
- Functional Performance Testing
- Integrated Systems Testing

OUR APPROACH

Glumac's deepest core value is sustainable designs and in the data center this translates to energy efficiency.

Mechanically and electrically, we are thought leaders. We work with equipment manufactures to innovate systems that don't yet exist; we work with them to improve existing equipment offerings. We remain at the forefront of designing innovative data centers. We use design concepts that greatly minimize electrical system losses and maximize an environment's ability to provide free cooling.

SOLUTIONS WE BRING TO THE TABLE

- Water-side Economization
- Air-Side Economization
- Indirect/Direct Evaporative Cooling
- Geothermal Cooling
- Solar Power
- Wind Turbines
- Heat Recovery
- Forced Ventilation
- Medium Voltage to Servers
- Alternate Distribution Topologies
- Flywheel UPS Technology
- Efficient Transformers

Glumac provides sustainable design alternatives for water efficiency, energy efficiency and construction techniques and materials that help to minimize impact on the environment.
